

Project Progress 3

Project Requirements:

Must be completed with your group before workshop 4.

This week, you will begin to add functionality to your app. Attempt to have a very solid front-end by the end of this sprint.

- If you do not yet have your objects (i.e. recipes, songs, TODOs, etc..) in your state, add some **default objects** now (similar to your past assignment)
- [OPTIONAL] If your group is using Redux, set up your actions and reducers
- Include at least 5 places where you are modifying/updating your state (either in your components, or using Redux). To make this very clear, you should have at least **5 hooks**, or **5 actions** (Redux).
 - Ex. navbars, slide-out drawers, pop-ups, forms, buttons, search bars, etc..
- Finally, be able to demonstrate that you have made progress toward completing more of your **minimal + standard goals!**

Note: You may certainly borrow code from your assignment, but make sure you're showing us new code that you've written specifically for your project!

Remember: These requirements are very minimal and are here to make sure that you are making forward progress on the project. We encourage you to make progress beyond the requirements in order to create an awesome project!

How to hand in:

When you are ready, create a branch titled "project_3". Do not push to this branch after the due date: **10am on June 26th**.
